1. Install standard U.S. steel 4" x 4" junction box.

Choose a mounting position, method, and hardware consistent with local building codes and regulations.

- The FreeSpace DS loudspeakers can be mounted directly on standard U.S. steel 4" x 4" junction boxes. There may be several junction boxes available that are compatible with FreeSpace DS loudspeaker wall brackets, but Bose Corporation only recommends the junction boxes it has validated.
- Please check pro.Bose.com for an up-to-date list of Bose-validated junction boxes.
- It is the responsibility of the installer to properly install junction boxes to ensure the safety of the loudspeaker installation. Consult a building professional for the proper junction box installation methods before installing the loudspeaker.
- The junction box should be installed in such a way that it is structurally capable of supporting the weight of the loudspeaker. A 10:1 safety weight ratio is recommended.
- Failure to properly install a junction box or loudspeaker could result in damage, injury or death.

2. Run wire through trim plate and wire to wall bracket.

U.S. 4" x 4" Standard Steel Junction Boxes Approved by Bose

Check pro.Bose.com for an up-to-date list of Bose-validated junction boxes.

Refer to your loudspeaker’s Installation Guide for more information about wiring the loudspeaker.
3. Attach loudspeaker wall bracket to trim plate.

Use (2) #8-32 x 2” truss head screws provided.

Note: Trim plate has two threaded inserts which should be oriented at the corners opposite of the junction box tabs.

4. Secure wall bracket and trim plate to junction box.

Use (2) #8-32 x 2” truss head screws provided.

Do not overtighten.
If using a power drill, set to a low torque setting.

5. Mount loudspeaker to wall bracket.

Refer to your loudspeaker’s Installation Guide for more information about mounting the loudspeaker to the wall bracket.

Do not overtighten.
If using a power drill, set to a low torque setting.
