

# ControlSpace® Remote v2.7

## Release Notes

29 July 2019

Revision: 1.0

### General

**This release of ControlSpace Remote software adds support for the following new features:**

- Volume up / down buttons that can be used instead of a fader for volume control
- Support for URL schemes so that other apps can launch CSR directly

**This release of ControlSpace Remote fixes various issues including:**

- Android CSR clients were losing connection after a few hours and not automatically reconnecting
- Changing the names of the AmpLink channels within CSD did not update the level slider labels within CSR
- Changing the names of the AMM Mics within CSD did not update the mute buttons within CSR
- When a PS-xxxD design is created in CSD, the PS-xxxD did not show up in CSR
- User was unable to add a room to a Room Combine via CSR
- Min/Max settings for Volume Sliders were not be applied in CSR
- Adding two of either Setup Button or Connection Indicator was causing CSR Builder to crash
- Toggle for pre-defined logic blocks was not working in CSR
- Upgrading a client from 2.5 to 2.6 without updating the design file was occasionally causing group and logic control to stop working
