

ControlSpace® Remote v2.9

Release Notes

17 March 2020

Revision: 1.1

General

This release of ControlSpace Remote software adds support for the following new features:

- Input and output metering now available in CSR. Please note, metering requires CSD v5.8 or later.
- Android version now supports using a PIN code to EXIT the application for MIMO MLOCK

This release of ControlSpace Remote fixes various issues including:

- Fixed an issue where group and logic control were not working properly in CSR.
- Name changes made to AmpLink channels were not being reflected properly.
- Name changes made to AMM Mics are not reflected in CSR.

Known Issues, Defects and Limitations

The following are the known issues and defects with this release. Information included here can be useful when troubleshooting issues with software or hardware operation.

VoIP

- It is not possible to end a VoIP call with CSR when the Far End is in a “Hold” state.

Metering

- CSR performance may decrease when more than 12 meters exist in a design.
